

ROBUST WEB-BASED VENDOR MANAGEMENT PLATFORM

VENDOR - ONE

A digital platform designed to onboard and manage vendors from any industry. The module helps businesses to go paperless and interact and transact with vendors, suppliers, landlords, and service contractors.

Besides managing contracts and insurance, it stores related documentation and other vital information in a centralized location. Therefore, it helps businesses achieve better decision-making capabilities and save time.

BUSINESS SURVEYS

The solution enables businesses to set up and issue multiple surveys by defining different business rules. It also allows vendors to fill in the required forms, without logging in to the application.

DIGITAL FORMS

It enables users to create predefined templates to be sent out as digital forms to vendors triggered by instances, i.e., survey responses, and capture additional data in the forms.

THIRD-PARTY SYSTEMS INTEGRATION

It can be easily integrated with any third-party systems such as supply chain and risk management platforms, ERP, and other systems.

DOCUMENT MANAGEMENT

It adopts the best practice of digital transaction management to create, e-sign, and exchange documents. It also enables a set of milestones and defined business rules for vendor documentation and quality control.

PLATFORM FEATURES

- Supplier onboarding
